## 6. PROCEDURE

- 6.1. The team will be required to erect approximately 13.5m of sheep netted fence with one strand of plain mild steel wire on the bottom of the netting and one strand of plain mild steel wire on the top of the netting (wire spacing to be determined by the competitors). A join in the netting should be made by hand (**no gripples**) where shown on the diagram. Box strainers should be constructed as shown on the diagram, at both ends of the fence and plain wire should be used to help support the second post as shown below. Approximately half way along the fence, it should turn at a 45° angle. At this point two struts should be used to support the corner post.
